Please note that this firmware is for the original hardware only. Such a thing is achievable only with hacked ebooks or epub, as each file has chapters to be managed.

Q: Can an ISS-JMS downlink from China's Tiangong-1 be received in the USA? Tiangong-1 was operated as a space laboratory by China. Can it be used as a relay to relay downlinks from ISS-JMS to China's ground stations, located in the USA? A: There are three issues: How can it receive signals from the ISS? This is not possible. While the ISS is above the Earth, it is still on the other side of the Earth, and most of its communication with ground stations is through very low-bandwidth downlinks (D-UHF) and uplinks (U-L-SAT), which are restricted to the USA. Also, any stations not established in the USA are restricted to a bandwidth of only about 10 kHz, so they are not able to receive anything over that. How can it relay downlinks to China? Well, China is a bit off the top of the Earth. From the top of the Earth, the ISS is above the equator, which means it is heading west at about 21 km/s, so it can be on the other side of the Earth by now. It's not clear where China is relative to the Earth, but China does not appear to be close to the ISS, which would be the only way to talk to China if they were behind the Earth. How can it receive downlinks from China? Well, that's what a relay is for. But it's not clear that any of the stations in China are capable of receiving signals from the ISS. The Baikonur, Cape Canaveral, Haikou, Taiyuan, and Taiyuan are all tracking stations of the US stations in charge of the ISS, and none of them are listed as receiving stations on China's list of ground stations. And if any of those stations are not actively receiving, they won't receive signals, even if they are already in a position to receive. The main tracking stations are all located within the USA, so they won't be able to receive anything from China. But there's also one more problem. From China, it's almost a 180° turn. The first segment of the ISS, the one that is on the top of the Earth f3e1b3768c
