Resolução Capítulo 3 Algebra Linear (Boldrini). how many answers are there?(a) The number of different answers on the book from the online library(b) The number of answers given with envelopes (c) The number of correct answers on the book In each case, how many different letters are there? I could not find the answer to this. A: If you are able to fit the answers in the envelope correctly, you have one answer. It has two possible ways of being put into the envelope. The counting is just the number of possible ways of fitting the answer in the envelope (or the number of ways of putting the envelope into the box), i.e.  $n!$ .
