mb-07241-3-48-4j103-031.html Jun 19, 2020 . ://hotmail.ru/ru/profile/sveta-odinod Jul 8, 2020 ://x22btrial.ru/blak.asp A: You  
need to read this entry: This script is designed to parse URLs of the form: (where "example.com" is an example domain) into  
their components: The scheme (protocol) portion is The hostname (domain name) is www.example.com The path portion is /  
This is just a JavaScript example of parsing a URL. You'll need to write a function that parses the data you get from the request.  
Note that the URL you get from the request is valid for the request, not necessarily for the client. To handle this, you can just  
use the URL location
