What's New In?

LiteShell is a graphical menu-driven shell for Windows. Although we will describe it as a shell, it can also be used as an explorer replacement. The system requirements are minimal: Windows 98 or later 128 MB RAM 60 MB of hard disk space 5 MB of CD-ROM space. LiteShell was originally designed for use with Windows 95. It is now being tested and improved with the hope of being released as a shell for Windows 98. The LiteShell menu is based on the Windows menu, and shows all the "well known"

menu items. You can hide or show items from this menu. Many of the menu items are "pull down" so that you can bring items into view by simply selecting them. How To Use LiteShell: Just double-click the LiteShell icon to start it. To exit LiteShell, press the ESC key. The LiteShell icon will be in your tray, making it easy to access LiteShell. Press the Tab key to open the LiteShell menu. Double-click on a menu item to display it. Hover the mouse over an item to see the description. Double-click on the desktop to open a folder. Double-click on a file or folder to open it. There are numerous hotkeys available for the LiteShell menu. To use a hotkey, press

and release the desired hotkey, then double-click the desired item. To enable a hotkey, just double-click the desired hotkey. This will highlight the desired hotkey in green. When you double-click the menu item again, the hotkey will be enabled. You may also press the "Menu Hotkeys" button at the top of the window to view a list of all hotkeys. When a menu item is selected, the LiteShell menu hides or shows the item as needed. You can use this feature to hide the "Programs" and "Documents" menu items. Simply deselect the item before the menu hides the item. LiteShell can handle both horizontal and vertical orientations. You can use the

"menu orientation" at the top of the window to select how you want the menu to be displayed. In the vertical orientation, the top-most menu items will be the top-most menu items. In the horizontal orientation, the left-most menu items will be the left-most menu items. While LiteShell is running, the "status bar" will appear at the bottom of the LiteShell window. The "Status Bar" is used to display text strings. Press the Tab key to move the text into the center of the window. Press the Backspace key to move the text out of the center of the window. You can also use the "Status Bar" to display "Window messages" or "Windows dialog
