Version history References External links EaseNet's Official Website Category:Windows software Category:News aggregators Category:Networking software Category:FTP clientsQ: Extract HTML Tags from string and use it to update an HTML page I am using XAMPP to run a local website. I have a table which will update every second. I have a php file which is processing a response from a 3rd party API and storing it in a variable. I have a variable of the HTML response string from the 3rd party API and I am not able to extract the correct HTML tags from the response string and am trying to modify them by adding a link at the top of the html. I have a php script that I want to be run every second and it is updating the table that is on my html. Here is the code from my HTML page. It is probably not the best way to do this, but it is the way I have done this so far. Demo We Are Hiring! We are looking for a talented WordPress Developer to join our team. See our open positions

NNTP is a generic protocol for the exchange of news articles on Usenet, that was created in 1991. On Usenet, it is most commonly used to refer to the news servers that implement this protocol, and to the clients that download and display the articles. Features: - Intelligent file searching through simple commands - yEnc support for newsgroup files - Support for multi-threaded downloads - HTTP support to display/download articles from HTTP servers (for those who cannot use NNTP) - Multi-line support to display multiple articles on one line - NNTP to HTTP support (allows you to read articles from Usenet) - Speed improvements (file searching and multi-threaded downloads) Changes: v1.7.9 * Prevent crash when closing the main window. v1.7.8 * Fix typo in help file. v1.7.7 * Minor changes to help file. * Exceptions from return codes are now more visible. v1.7.6 * Fix a bug where the "main window" button was visible after a return from a command. v1.7.5 * Fix a bug in the file list that caused the application to hang. * Fix a bug where close of the "view" button resulted in a bug. v1.7.4 * Minor changes to help file. * Fixed a bug that would cause a crash if the file name contains newline characters. v1.7.3 * Fix a bug where the application was unable to select a directory on Linux when

"browse" was pressed. v1.7.2 * Cleanup code. v1.7.1 * Minor changes to help file. * Fix a bug where the main window wasn't cleared after a return from a command. v1.7.0 * Fix a bug that caused a crash if the user presses CTRL-W. * Fix a bug that caused the "update" button to appear grayed out. v1.6.9 * Update for new Java 1.3.1 runtime. v1.6.8 * Fix a bug that caused a crash when closing the main window. v1.6.7 * Fix a bug that caused a crash when pressing ESC. * Minor changes to help file. * Fix a bug that caused the main window to close before the
