More advanced users may access tools such as the utilities. Object-level commands The user can use the object-level commands to move, copy, move and paste, or delete objects. The object-level commands are also available to other users to allow them to perform some operations on objects. All drawings are based on either named layers, or groups of layers. Command reference In AutoCAD, commands are listed in a dialog box. When a command is chosen from the dialog box it is highlighted in the drawing area, and its name is displayed in the Status Bar. Some commands have a shortcut key that can be typed by a keyboard. The command reference on the About tab in the Help dialog box shows a list of all commands. The arrow on the right side of the Status Bar indicates the current command, while the arrow on the left side indicates the most recently executed command. Commands such as Cut, Copy, Paste and Undo (Ctrl+Z) also have hotkeys on the keyboard. General Layout tools A number of layout tools are available in AutoCAD. The most important of these is the Ruler tool. This can be used to set the distance between objects and the units of measure. Add or subtract from a distance: With the Ruler tool, the user can change the distance between two objects. Select an object, and press Enter. Move the ruler to a specific distance. The Ruler tool can be used to create a CAD paper space using the Units tool. Create or delete objects: The user can create or delete objects using the tools.
