Windows User interface The software consists of three main parts: AutoCAD Download With Full Crack itself, the drawing manager, and the drawing workspace. Some of these items can be integrated into each other, but most are mutually independent. The user can enter drawings using the drawing workspace, a large or small single window or one of the many panes that allow a particular view of the document. The drawing workspace The drawing workspace, sometimes called the Drawing Area, is where the user enters a drawing. It can be positioned on the screen with mouse clicks and automatically moved when the user types a command or selects a tool from a menu. Each window has a unique name, and by default each window opens on a separate layer. The drawing workspace is where the user enters the drawing. On the left of the workspace is a zoom toolbar, which allows zoom changes to be made to the drawing from 1% to 19.99% on a 10% step basis. The zoom window also shows the document size. Zoom to drawing area is an option on the right. This zooms the drawing workspace to the center of the drawing, which is often a useful option. Drawing workspace viewports A viewport, also called a vwap or workspace, is the graphical section of the drawing that the user can see at any particular time. Viewports are the main interface with AutoCAD. The user can change the viewport and zoom level of the drawing using the viewports and Zoom buttons on the drawing workspace. The viewports can be arranged in any order, each with its own size and position. A viewport can be automatically "locked" to a particular element of the drawing, so that the user can zoom out and the viewport will remain at the same scale and at the same location within the drawing area. Each viewport is associated with one or more drawing layers. To select a viewport, the user selects it from the Viewports panel, which contains thumbnails of all the viewports. There are several ways to access the Viewports panel: Double-click the AutoCAD icon in the application's taskbar. Type workspace followed by the F10 key, or click the "Window" button on the drawing workspace window. Type viewports on the command line and press Enter. The user can select any of the viewports as the active viewport. In the case of more than one viewport, the active viewport is indicated in a1d647c40b
