Note The idea of alignment and overlays will help you to understand how Photoshop lays out documents. Normally you would divide your document into separate layers and edit each one separately. You can then combine the layers into a final image, as shown in Figure 5-3. You can use the various Photoshop tools to align your objects and then play with the spacing, using the Free Transform tool to resize text and other objects. Figure 5-2. Some images are meant to be viewed just as they are. Others can be viewed a number of ways. These images of a car show you that the shot can be made either dark or light, with the body of the car both shown and missing. The image on the left makes an excellent body copy; the one on the right gives you the added bonus of text as well. Figure 5-3. Layers enable you to make different parts of an image visible at different times. If you were copying an image from another app, you could add in a layer with text saying, "Thanks for the car." Once the text is added, you can move it to wherever you want within the document. * **Raster Image Editing:** Photoshop offers the ability to alter raster images, which means you can edit the pixels in an image. Figure 5-4 shows a photo before editing and after editing. You may find you want to edit an image in Photoshop, then save it as another file format, such as TIFF or GIF

Shadows A common feature in Photoshop Photoshop's shadows are useful for many different styles of photos. With shadows, you can make a photo look more dramatic and create a mood. Shadows can be used for: A More dramatic look Making photos more interesting and fun Setting a mood or look Illuminating a photo Adding life to a photo Shadows can make a photo more dynamic and give it a dramatic effect. They can be used to change the look of an image. A simple example is when shadows are used to make a photo look more rounded and soft. If you want a more crisp and objective look, then shadows can be used for that. Saturation Photoshop's saturation is a powerful tool. It gives a photo a more vivid look. Saturation changes the color of a photo. This can make a photo appear more saturated (filled with more color) or less saturated (more colorless). Saturation changes the gray balance. With saturated colors, the photo will have more contrast and will appear more complex to a viewer's eye. With less saturated colors, the photo will appear more monochromatic, which is a type of color with only a few hues. Highlights A common effect in Photoshop Highlights can be used to make a photo look brighter or duller. A glowing light often makes a photo look more fresh, while a dim light can make a photo look aged or dark. You can use the Highlights tool to make a photo appear more bright or dull than it actually is. Posterize Photoshop's Posterize tool can be used to make a photo look more flat or more life-like. Using the settings that are on the Tool Options bar, you can make a photo look more faded and more dimensional. Posterizing an image will give it a dark-looking texture. The more the image is posterized, the more it appears to be flat or concrete-like. Gradient Map A simple example of a gradient map is the gradient background in one of the figure examples. The color gradient can be adjusted on the Tool Options bar to make a photo appear more vibrant, duller, or even gray. Colors The colors feature allows you to use various colors in an image. With this tool, you can make an image look more vibrant, duller, or even gray. Using the colors tool, you can change the color of any area in a photo by erasing

What's New in the Adobe Photoshop CC 2015?

The Curves tool has a wide range of uses, including darkening and lightening images. You can also use it for making almost any change to an image. For example, you can change the hue and saturation of an image. The Gradient tool is used for painting with a wide variety of colors and textures. It can be used to make an image look glossy, glow, or fade away. The Hue/Saturation tool allows you to change the amount of red, green, and blue in an image and also the brightness of these colors. Many people use it to make brighter, more saturated images. The Magic Wand tool is one of the most versatile tools in Photoshop. You can make selections based on color, brightness, or even the size of objects. The Magic Wand can be used to copy or remove objects from an image. The Pen tool is a popular tool for drawing lines and shapes on images. The Paint Bucket tool is often used for erasing unwanted or unwanted objects on images. The Paths tool allows you to draw paths on an image. These paths can be used to make photos look special. They can be used to make specific images have a special look, such as snowflakes or stripes. They can also be used to make elements look like they are floating in the air, or moving. The Pen tool is used for drawing lines, arcs, and rectangles on an image. You can also use it to erase, or make lines thicker or thinner. The Quick Selection tool is used for making selections within images. You can choose the size of objects that you want to make a selection. You can also make a selection based on color. This tool is often used to make other changes in images. The Rays tool allows you to create a special effect on an image. You can change the brightness and opacity of an image, as well as having it add bright or dark light. You can also use it to make objects glow or fade. The Reverse Selection tool allows you to make selections on an image. It works the same as the Quick Selection tool, except that the tool also changes its color to match the color of the background. The Scissors tool is one of the oldest tools in Photoshop. It is used for making selections and moving objects around an image. The Sponge tool is used for making objects look like they are wet or transparent. You can also use it to increase or decrease the brightness of an image. The Smudge tool is used for
