If you cannot find the answer you are looking for feel free to contact us. Q: How do I use CakePHP's "deep" routing Okay, so I'm using CakePHP 1.3 and for my main front controller, I have a route like this: `App::import('Controller', 'Users');` `Router::connect('/users/*', array('controller' => 'Users', 'action' => 'index'), array('pass' => array('User'), 'child' => true));` This routes to `/Users/index`. Now, to add a children route I'm using this in my route file: `App::import('Controller', 'Parents');` `Router::connect('/parents/*', array('controller' => 'Parents', 'action' => 'index'), array('child' => true));` Which now routes to `/Parents/index`. The problem with this is that in my controllers, my `$this->request->params[0]` just returns the parent, and

Farm Works Office X64
