Autodesk claims that AutoCAD 2018 is designed to make users' lives easier. However, users do not need to be familiar with the technical details of CAD to learn how to use it and to create professional looking drawings. Below is a summary of AutoCAD basics. Understanding the basics of AutoCAD AutoCAD is a suite of several applications. It consists of the main AutoCAD application, several drawing-related applications, and a feature called the "plumbing" (the AutoCAD "backbone"). The plumbing is usually hidden from the user, but it controls all the drawing-related applications and provides their features. If you choose to open AutoCAD as a drawing window, you see the entire drawing area along with two menus: the Main Menu and the View Menu. The Main Menu includes four tabs and 15 sub-menus. The View Menu contains two options and one function. As shown in the following illustration, the View menu contains the following options: Zoom to Fit (left), Zoom Extents (middle), and Zoom to 100% (right). The View menu also contains a function, called "Center on Raster" (right). To use this function, select the Center on Raster item and choose a center point. When you choose "Zoom to Fit" (left) from the View menu, you see the entire drawing area as you zoom out to fit the drawing area to your monitor. When you choose "Zoom Extents" (middle), you can choose the "left" side, "top" side, "right" side, and "bottom" side of the drawing area as the center for zooming. The distance from the center of the screen is measured in "pixels." The "pixels" represent points on your monitor. For example, if the distance between the center of your monitor and the top left corner is 1,024 pixels, then the distance from the center of the monitor to the top left corner is 1,024 pixels. The distance between the center of your screen and the center of the drawing area can be either fixed or adjustable. The default setting is 1,024 pixels. You can choose to have this distance fixed in the "View" menu, the "Windows" menu, or in both locations. If you choose "Center on Raster," the distance between the center of your screen and the center of the drawing area is fixed at

Import the CSV file with all the parameters from the data.csv file into the application. You will find all the parameters in the Data tab in the applications window. Selecting the cutting machine in the menu bar and using the parameters of the cutting tools you can set the machine tool and the tool parameters. The options of the tool options are available in the toolbar of the application. Importing data You can import data from third-party sources. You can use the importation CSV file of from the Tooling Portal, the only condition is that you need to make it public. File File is the option to import the file and pick the content of the file. You can import a single file or a whole directory. Formula analysis You can calculate values to the various parts of the 3D model. All the values are stored in the form of a formula and you can check the values to a separate tool. Visualization and debugging You can use the tools to visualize the data. Licensing Autodesk makes CAD software available under a BSD license. Addendum Autodesk is the original designer of AutoCAD and AutoCAD LT. It is headquartered in San Rafael, California.
