You can use the many tools in AutoCAD drafting for drafting 2D shapes, images, and perspective views. 3D Modeling AutoCAD has extensive modeling and rendering tools. These tools allow you to use drawings to create an unlimited number of 3D images that you can view from any angle. You can also create parametric models, which can be easily edited. The following are the main features of AutoCAD 3D modeling and rendering. Example To create a custom command in a drawing that uses the "Export" data panel and creates a PDF, create a class that inherits from System.Windows.Forms.DataVisualization.Charting.PolarArea.CreateExportPdfMethod. This class adds the ability to pass a parameter to the document. This allows the user to either provide or access their own information or use the current document contents. public class MyChart : PolarArea { private void MyChart\_DrawChart(System.Windows.Forms.DataVisualization.Charting.Chart chart, System.Windows.Forms.DataVisualization.Charting.SeriesChartArea chartArea) { chart.ChartAreas.Add(chartArea); // Use a brush to draw a blue fill to the Polar Area chart.ChartAreas[0].AxisX.CategoryAxis.AxisLine.LineColor = Color.Blue; chart.ChartAreas[0].AxisX.CategoryAxis.MajorGrid.LineColor = Color.Black; chart.ChartAreas[0].AxisX.MajorGrid.LineWidth = 0.75F; chart.ChartAreas[0].AxisX.LabelStyle.Format = "HH:mm"; chart.ChartAreas[0].AxisX.MajorGrid.Interpolation = InterpolationType.Linear; chart.ChartAreas[0].AxisX.LabelStyle.Interpolation = InterpolationType.Linear; chart.ChartAreas[0].AxisY.Interval = 0.01F; } private void MyChart\_Paint(System.Windows.Forms.DataVisualization.Charting.Chart chart, System.Windows.Forms.DataVisualization.Charting.Painter painter) { 5b5f913d15
