Although the number of drivers has increased over the last decade, it hasn't kept pace with the number of passengers. In a note to clients Tuesday, Evercore analyst Gregory Blachman raised his price target for Lyft to \$96 from \$89 a share, noting the company is offering shareholders more equity. "The reason they're higher is their [international] business is doing better and they have more time to grow that business," Blachman said, noting it's still a small business with only \$1 billion in revenue. The data-gathering software startup has been the latest in a slew of young and fast-growing tech startups to face questions about its business. Earlier this year, Lyft was the subject of a report from a mystery investor who asked people to name the unicorn companies and compared the results to U.S. population data. The data show that Uber is the most popular unicorn company, with shares of the ride-hailing firm totaling roughly \$84 billion.
