Many professional designers and artists also use Photoshop Elements or Photoshop Lightroom to share files on a network or to store and share images and photos. If you want to use these programs to edit your photos and create other types of images, the next section will help you get started and see what you can do. Using Photoshop If you bought Photoshop or have access to it through your job, it's likely you already have a version that you know and love. It's also likely that you use it regularly. Even if you don't know what you're doing, you're probably okay with the fact that you can create, manipulate, and upload a large number of photos and create vector illustrations, drawings, charts, and graphs. Charts and Graphs in Photoshop Photoshop has a variety of tools and features that help you create and edit charts and graphs, including graph paper and creating paths. You can either type in a table or choose an object on the toolbox to edit. 1. Type in a Table Type in a simple spreadsheet that you can then edit and use as a basis for more complex charts and graphs. 2. Use an Object Select an object or table from the toolbox and drag it to the document so that you can type in data. Then type in your data. 3. Paste an Excel Table Select the table you wish to convert and copy it to the clipboard. Then select a chart you'd like to use as a template and paste the table. This makes it easy to change the table from an Excel spreadsheet. 4. Create a Chart Create a table or graph by selecting the table or graph object from the toolbox and selecting "Table," then clicking "Text." This also creates a vector graphic that looks similar to the original and is editable. Creating Vector Graphics Vector graphics (also called electronic graphics) are created using vectors, which are geometric shapes instead of pixels that you can edit and redraw over and over again. 1. Draw and Transform Draw a vector on a new layer and edit it to your liking. Be sure to save your work often. When you use an image or object you like, be sure to add a new layer to your image and clip the layer to an image layer or the whole image. 2. Customize an Image To do this, select the white or gray square on an image and add a new layer
