When you're working with a specific file, however, "Adobe Photoshop" is the name that you type. ## Understanding Layers Each image in Photoshop is a layer in a file. Layers are the building blocks of an image and can be moved, resized, and turned off if you need to. Just as the building blocks of a house are the walls, floor, ceiling, and so on, the building blocks of an image are the layers. You start a new image by creating a new layer in a new, empty file. The layer you add to the file is called the active layer. You can change the active layer by double-clicking anywhere on a Photoshop image. Figure 2-1 shows the active layer (the one that's selected) and five other layers. Photos of Image-editing tools. © Drew Rosenmann. Image courtesy of Drew Rosenmann. You can also set the active layer to appear as a layer on top of all other layers by clicking the New Layer icon. That's covered in just a moment.

Interference from the microcavity of the ring resonator in 2D plasma waves with zero filling. Plasma waves with nearly zero modes and similar to the ion density envelope of a classic two-dimensional (2D) plasma are excited in the linear regime. Such a configuration can be obtained in microcavities by using the zero-filling approach, which produces a modulated intensity of the wave that is antiphase with the mode. We performed Fourier analysis of a 2D simulation to study the transition from an ion density envelope to a plasma wave and found a strong interference pattern. Finite-difference time-domain simulations are used to demonstrate that the onset of the plasma wave can be associated with the disappearance of the interference pattern at the lower frequency modes... Welcome to OpenMESH's documentation! =================================== Welcome to the official documentation for OpenMESH. The use of transgenes in mice can help to address both regulatory and developmental questions related to gene expression in the context of whole animals. However, current strategies for generating specific tissues with a suppressed transgene have involved engineering the mouse genome to express doxycycline (Dox)-dependent repressors or employing embryonic stem cells to generate chimeric mice. Here we report a tissue-specific silencing strategy, which turns off a transgene by Dox-dependent regulation of the endogenous gene's expression. The transgene-encoded beta-galactosidase was suppressed in the lungs, kidney, skin, and livers of Dox-treated mice at a level that was dependent on the dose of Dox and the duration of exposure. The silencing correlated well with the level of endogenous beta-galact

Q: Gradle, adding metadata for every dependency If I have a Java project, and I have a Jar for each of my dependencies, that I have added to the build.gradle file, is there a way I can add some metadata to each Jar? For example, if I have a Jar I depend on that has a version number and some other metadata (like the author's name) in it, is there a way I can do something like the following? dependencies { compile 'com.foo:bar:1.0.0' } With something like compile.metadata.somekey = value If I try to run something like compile.metadata.someKey = value for example, it doesn't work. Is there a way I can do this? A: You can use the PropertiesFileOutputFormat. The default properties file uses a format called the gradle way. If you use this way, it will look like compile.properties. properties { someKey = 'value' } and the vehicle operator are entitled to be heard simultaneously so that the decision about revocation could be based on a reasonable assessment of their credibility. There are no textual or structural limits on this interaction. Because revocation hearings are quasi-criminal, sometimes the accused will receive a different form of process than he would receive in the criminal proceeding, but the order would clearly have preclusive effect. 17 In response to Sipe's second contention, that, while the order was final, the district court was not yet in possession of the revocation hearing transcript, our perusal of the record reveals that there was not an intermediate remand to the Secretary. Both parties in the judicial review proceeding admitted to the magistrate that the transcript had not yet been prepared and, while the magistrate's decision is not entirely clear on this point, it appears that the magistrate was not even aware of the absence of the transcript. Therefore, for purposes of this case, the decision of the magistrate should be taken as stating the evidence that the Secretary had before him and, by order of the magistrate, the Secretary, therefore, was called upon to determine whether he would revoke Sipe's disability benefits for failure to cooperate. 18 We REVERSE and REMAND for further proceedings not inconsistent with this opinion. * Circuit Judge of the Sixth Circuit, sitting by designation Thanks.
